

Team 4 — Day 1 Task Report (1st June 2026)

Objective

Understand the basics of:

- Development setup
- GitHub workflow
- SLMs
- RAG systems

before starting project implementation.

Tasks to Complete

1 Install Required Tools

Install the following software:

- Python
 - VS Code
 - Git
-

2 Create & Setup GitHub Account

Complete the following:

- Create GitHub account
 - Login to GitHub
 - Setup GitHub profile properly
-

3 Research Topics

Learn and prepare short notes about:

Topics

- What is SLM?
 - What is RAG System?
 - Difference between LLM and SLM
 - How RAG works with LLMs and SLMs
-

4 GitHub Repository Creation

Tomorrow evening session will include:

- How to create a GitHub repository
- How to push files into GitHub
- How to maintain project documentation

Important Information

For the next 45 days, we should maintain a dedicated GitHub repository for our learning journey and project work.

For the first 7 days, we will focus on: Building a Simple RAG System

Documentation Task

Create a documentation file about today's work.

Include:

- Installed tools screenshots
- GitHub account screenshot
- Notes about SLM and RAG
- Problems faced during setup
- What you learned today

Submission

Submit tomorrow during the evening session:

- Screenshots
- Notes
- Documentation file
